

VAPORTEK

Founded in Milwaukee, Wisconsin, USA, Vaportek has been manufacturing and marketing air treatment products for over 20 years. Vaportek's unique technologies, originally developed for use in the healthcare market by a Fortune 500 company, have led to systems that now provide preferred air treatment for a variety of markets, including healthcare, disaster restoration, hospitality, automotive and sanitary supply industries.

Over 15 million Vaportek products have been sold since their introduction, successfully treating air quality problems in worldwide locations from Tokyo to Toronto.

UNIQUE TECHNOLOGIES

Vaportek is your source for a wide range of innovative and ecologically sensitive air treatment and odor neutralization products. We use 32 natural essential oils such as eucalyptus, pine, citrus and many others. With the membrane systems, oil compounds are hermetically sealed into specially formed membranes that permit the oil to breathe through the surface of the envelope as a vapor. The disk systems use a special fiber element that is impregnated with the same natural oil blends as the membranes. Both systems rely on convection to carry the vapor quickly wherever air circulates - whether diffused passively or through the use of electrical or battery - powered machines.

PROVEN PRODUCT USES

Vaportek products have proven effective in millions of uses - including hospitals and long-term care medical facilities; oil reclamation areas; rubber, asbestos, shoe and fiberglass manufacturing plants; tanning and paint solvent companies; hotels; athletic facilities; office buildings, and fire and restoration work.
